TECHNOLOGY BREAKTHROUGH

EMI Reduction Technique

In another breakthrough of our continuous re-engineering success, Amtek has achieved a new innovation in EMI Reduction Technique.

Advantages:

- EMI reduction with sheetmetal design
- Reduce number of gasket used
- DFM solutions right at concept stage
- Cost effective sheetmetal solution
- Shorter assembly time?

Amtek provides solution to attenuate signal of Electromagnetic wave by means of special metal forming features introduced to chassis design. This technique can be applied to wide range of products including enterprise server and computer chassis.
